September 2001
The Economic Impact of the Health Sector on the Economy of Cleveland Area Hospital Primary Medical Service Area

Medical facilities have a tremendous medical and economic impact on the community in which they are located. This is especially true with health care facilities, such as hospitals and nursing homes. These facilities not only employ a number of people and have a large payroll, but they also draw into the community a large number of people from rural areas that need medical services. The overall objective of this study is to measure the economic impact of the health sector on the economy of Cleveland Area Hospital medical service area. The specific objectives of this report are to:

1. Summarize the direct economic activities of the health sector,
2. Review concepts of community economics and multipliers, and
3. Estimate the secondary impacts of the health sector on Cleveland Area Hospital medical service area.

No recommendations will be made in this report.

Cleveland Area Hospital Medical Service Area Demographic and Economic Data

General demographic data for Cleveland Area Hospital medical service area is presented in Table 1. The population of Cleveland Area Hospital primary medical service area for Pawnee and Osage Counties was 10,647 in 1990 according to the U.S. Census Bureau and was 10,354 in 2000. The population of Cleveland according to the 1990 Census was 3,194 and the 2000 population was reported to be 3,282, representing an increase of 2.8%. The other community located in the medical service area in Pawnee County is Hallett, with a 1990 population of 159

and a 2000 population of 168. The rural area in Pawnee County has also increased from 1,820 in 1999 to 2,071 in 2000. In Osage County Hominy decreased from 1990 to 2000 from 3,291 to 2,584. This is a –21.5% change. The communities of New Prue and Osage showed an increase in population, as did the rural areas of Osage County. The overall primary service area totals for Cleveland Area Hospital decreased 1.0% from 10,647 in 1990 to 10,542 in 2000.

The latest census information for the communities in the Cleveland Area Hospital primary service area as well as the information for Pawnee and Osage Counties is attached as Appendix A.

**The Direct Economic Activities**

Employment and payroll are the important direct economic activities created in Cleveland Area Hospital medical service area from the health sector. The health sector is divided into the following five components:

- Hospitals
- Doctors and Dentists (includes other medical professionals)
- Nursing and Protective Care
- Other Medical and Health Services (includes home health care and county health departments)
- Pharmacies

The health sector in Cleveland Area Hospital medical service area employs 280 full-time equivalent employees and has an estimated payroll of $8,543,532 (Table 2). The health sector in Cleveland Area Hospital medical service area is typical of many rural counties, with one hospital, four physicians, two dentists, two chiropractors, two optometrists, two nursing homes, one county health department, four pharmacies, and two home health services. SOURCE: Provided by local information
Hospital medical service area is unique in that the Hominy Health Service and Counseling Center plus two medical equipment supply companies are located within the area.

The Hospital component employs 74 people with an annual payroll of $1,944,032. The Doctors and Dentists component employs 48 full-time equivalent employees with an annual payroll of $2,330,000. The Nursing and Protective Care Component employs 105 people with an annual payroll of $2,625,000. The Other Medical and Health Services component employs 35 employees for an annual payroll cost of $839,500. The Pharmacies component has a total of 18 employees totaling a payroll of $805,000. The total number of direct employees for the Cleveland Area Hospital primary service area is 280 with a direct payroll total of $8,543,532.

It should be noted that many rural communities have a large number of elderly, and the ranchers and farmers often retire in the towns. Thus, Nursing and Protective Care facilities are an important component of the health sector.

In summary, the health sector is vitally important as a community employer and important to the community's economy. The health sector definitely employs a large number of residents. The health sector and the employees in the health sector purchase a large amount of goods and services from businesses in Cleveland Area Hospital medical service area. These impacts are referred to as secondary impacts or benefits to the economy. Before the secondary impacts of the health sector are discussed, basic concepts of community economics will be discussed.
Some Basic Concepts of Community Economics and Income and Employment Multipliers

*Figure 1* illustrates the major flows of goods, services, and dollars of any economy. The foundation of a community’s economy is those businesses that sell some or all of their goods and services to buyers outside of the community. Such a business is a basic industry. The two arrows in the upper right portion of *Figure 1* represent the flow of products out of, and dollars into, a community. To produce these goods and services for "export" outside the community, the basic industry purchases inputs from outside of the community (upper left portion of *Figure 1*), labor from the residents or "households" of the community (left side of *Figure 1*), and inputs from service industries located within the community (right side of *Figure 1*). The flow of labor, goods, and services in the community is completed by households using their earnings to purchase goods and services from the community's service industries (bottom of *Figure 1*). It is evident from the interrelationships illustrated in *Figure 1* that a change in any one segment of a community's economy will have reverberations throughout the entire economic system of the community.

Consider, for instance, the closing of a hospital. The services section will no longer pay employees and dollars going to households will stop. Likewise, the hospital will not purchase goods from other businesses and dollar flow to other businesses will stop. This decreases income in the "households" segment of the economy. Since earnings would decrease, households decrease their purchases of goods and services from businesses within the "services" segment of the economy. This, in turn, decreases these businesses' purchases of labor and inputs. Thus, the change in the economic base works its way throughout the entire local economy.
Figure 1.

Community Economic System
The total impact of a change in the economy consists of direct, indirect, and induced impacts. Direct impacts are the changes in the activities of the impacting industry, such as the closing of a hospital. The impacting business, such as the hospital, changes its purchases of inputs as a result of the direct impact. This produces an indirect impact in the business sectors. Both the direct and indirect impacts change the flow of dollars to the community's households. The households alter their consumption accordingly. The effect of this change in household consumption upon businesses in a community is referred to as an induced impact.

A measure is needed that yields the effects created by an increase or decrease in economic activity. In economics, this measure is called the multiplier effect. A type III multiplier is used in this report. It is defined as:

Type III\(^1\) - is the ratio between direct employment, or that employment used by the industry initially experiencing a change in final demand and the direct, indirect, and induced employment.

A Type III employment multiplier of 3.0 indicates that if one job is created by a new industry, 2.0 jobs are created in other sectors due to business (indirect) and household (induced) spending.

\(^1\)The Type III multiplier is a modified Type II multiplier and is calculated slightly differently than normal type II methodology. Researchers feel it is more accurate. For specific reasons and how to calculate see [1].
Employment and income multipliers for the area have been calculated by use of the IMPLAN model. It was developed by the U.S. Forest Service\(^2\) and is a model that allows for development of county multipliers. The Type III employment multipliers for the five components of the health sector are shown in Table 3, column 3. The Type III employment multiplier for the hospital component is 1.77. This indicates that for each job created in that sector, .77 jobs are created throughout the area due to business (indirect) and household (induced) spending. The Type III employment multipliers for the other health sector components are also shown in Table 3, column 3. The Type III income multiplier for the hospital sector is 1.57 (Table 3, column 6). This indicates that for each dollar created in that sector, .57 dollars are created throughout the area due to business (indirect) and household (induced) spending. The Type III income multipliers for the other four health sector components are also given in Table 3, column 6.

Applying the employment multipliers to the employment for each of the five health sector components yields an estimate of each component’s employment impact on Cleveland Area Hospital medical service area (Table 3, columns 2, 3, and 4). For example, the hospital has an employment of 74 employees; applying the Type III employment multiplier of 1.77 to the employment number of 74 brings the total employment impact of the hospital to 131 employees (74 x 1.77 = 131). The Doctors and Dentists component has a direct impact of 48 employees and with the application of the Type III multiplier of 1.74; the total impact comes to 84 employees.

\(^2\)For complete details of model, see [1] and [2].

SOURCE: 1998 IMPLAN Data Base; Employment and Income from local sources
The Nursing and Protective Care component has a direct effect of 105 employees and an employment multiplier of 1.55, to bring the total impact to 163 employees. The Other Medical & Health Services component has a direct effect of 35 employees, an employment multiplier of 1.62, and a total employment impact of 57 employees. The Pharmacies component has 18 employees and a total impact of 28 employees, applying the employment multiplier of 1.53. The total employment impact of the health sector in Cleveland Area Hospital medical service area is estimated at 463 employees (Table 3, total of column 4).

Applying the income multipliers to the income (payroll) for each of the five health sector components yields an estimate of each component’s income impact on Cleveland Area Hospital medical service area (Table 3, columns 5, 6, and 7). The Hospital component has a total payroll of $1,944,032; applying the Type III income multiplier of 1.57 brings the total Hospital income impact to $3,052,130 ($1,944,032 x 1.57 = $3,052,130). The Doctors and Dentists have a total income impact of $3,075,600, based on the application of the income multiplier of 1.32 to the payroll of the Doctors and Dentists component of $2,330,000. The Nursing & Protective Care component has a payroll of $2,625,000, a multiplier of 1.55, resulting in an income impact of $4,068,750. The Other Medical & Health Services has an income impact of $1,527,890, based on the direct payroll of $839,500 and the income multiplier of 1.82. The Pharmacies component has an income impact of $1,368,500 based on the direct payroll of $805,000 and the income multiplier of 1.70. The total income impact of the health sector in Cleveland Area Hospital medical service area is projected at $13,092,870 (Table 3, total of column 7).

Income also has an impact on retail sales. If the county ratio between retail sales and income continues as in the past several years, then direct and secondary retail sales generated by the health
sector and its employees equals $3,197,840 (Table 3, total of column 8). Each of the five health sector components’ income impact is utilized to determine the retail sales and a one-cent sales tax collection for each component. Then the five components are totaled to determine the direct and secondary retail sales generated by the health sector. A one-cent sales tax collection is estimated to generate $31,979 in Cleveland Area Hospital medical service area as a result of the total health sector income impact (Table 3, total of column 9). This estimate is probably low, as many health care employees will spend a larger proportion of their income in local establishments that collect sales tax. The bottom line is that the health sector not only contributes greatly to the medical health of the community, but also to the economic health of the community.

Summary

The economic impact of the health sector upon the economy of Cleveland Area Hospital medical service area is tremendous. The health sector employs a large number of residents, similar to a large industrial firm. The secondary impact occurring in the community is extremely large and measures the total impact of the health sector. If the health sector increases or decreases in size, the medical health of the community, as well as the economic health of the community, are greatly effected. For the attraction of industrial firms, businesses, and retirees, it is crucial that the area have a quality health sector. Often overlooked is the fact that a prosperous health sector also contributes to the economic health of the community.

</tbody>
</table>

---

* Represents zero or rounds to zero.  (X) Not applicable.
1 Other Asian alone, or two or more Asian categories.
2 Other Pacific Islander alone, or two or more Native Hawaiian and Other Pacific Islander categories.
3 In combination with one or more of the other races listed. The six numbers may add to more than the total population and the six percentages may add to more than 100 percent because individuals may report more than one race.
